

Docs, Examples, Scripts

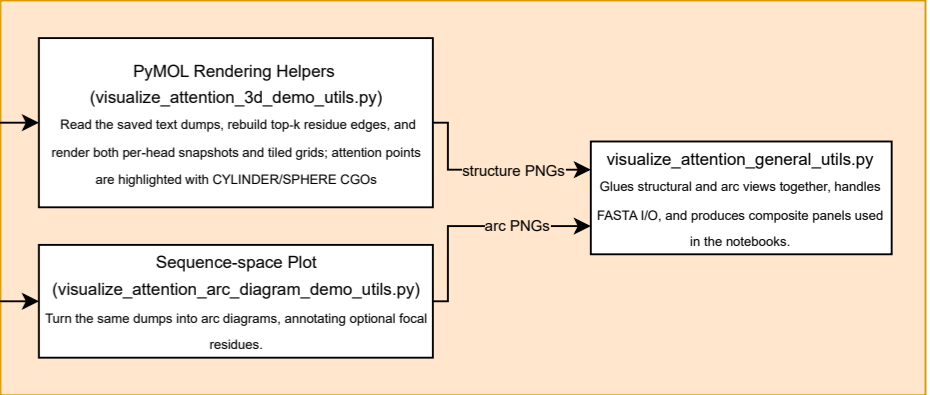

Foundational Utilities

Core Model Package

Visualization Layer

regression coverage for trunk modules

launch threading workflow

launch inference workflow

launch training workflow

usage instructions / notebook configs

runnable CLI entry points

sample FASTA + configs

reuse config/load\_model; bypass MSA

set config.attn\_map\_dir, attention\_config

DB/binary arg defs

generate MSA + features

lightning batches + EMA

threaded batches

run inference batches

training mini-batches

utility modules

Trunk embeddings

invoke attention primitives

invoke triangular attention

persist recent attention tensors

head residue weights for PyMOL

head residue edges for arcs

structure PNGs

arc PNGs

losses, schedulers, EMA helpers

protein.to\_pdb support

CUDA attention\_core implementation
